## About the school

"Better learning will not come from finding better ways for the teacher to instruct, but from giving the learner better opportunities to construct"

**Prof. Seymour Papert MIT Media Lab, 1996**

Darunsikkhalai School for Innovative Learning (of King's Mongkut University of Technology Thonburi) was founded on two learning theories: Constructivism and Constructionism, of Jean Piaget, a developmental psychologist and philosopher, and Seymour Papert, an MIT mathematician and educator of Media Lab, MIT

These two theories provide knowledge and insight on human cognitive and psychological learning processes, which lead us to believe and develop research on a new type of educational model:

Even though Constructionism originated from the Massachusetts Institute of Technology (MIT), the similarity of its fundamental philosophy to Thailand's Dhamma (Buddha's teachings) enables the theory to be easily understood and adopted into Thai culture. Dhamma places much importance on the process of learning and learning from experience, which ties in closely with Constructionism. In application of the theory, DSIL uses these three basic learning processes for knowledge management: 1. Thinking or Designing 2. Making or Doing 3. Reflecting or Contemplating
